

Electricity Hunt

I can identify appliances that run on electricity.

I can explain how Thomas Edison's inventions changed people's lives.

Explore your school to find examples of objects that use electricity. How many can you find?

When you have finished exploring the school, think about what it would be like if Thomas Edison had not invented his electrical system. How would things be different without each electrical item?

One example has been done for you.

Electrical Item	What If There Was No Electricity in School?
Lights	We would find it hard to see without the lights, especially on a dark day.
